ENG

APC tem como principal atividade a Produção e Comercialização de Ferragens para Mobiliário e Construção Civil.

APC tem vindo a crescer de forma contínua e sustentável nos últimos anos, sendo hoje um dos grupos económicos de grande relevo, no âmbito das Ferragens, a operar em Portugal e nos últimos anos tem-se expandido para os mercados externos.

Com uma vasta gama de produtos em aço inox, APC é uma empresa moderna, com ambição e determinação na prossecução dos seus objectivos, fundamentalmente no crescimento e desenvolvimento contínuo das suas linhas, para que estas possam responder aos desafios dos mercados e solucionar as lacunas existentes.

Na produção, APC tem investido nas mais avançadas tecnologias, que associadas ao carácter familiar da empresa, permite construir a base para uma excelente relação preço/qualidade.

Os elevados padrões de qualidade dos produtos APC exigem que estes sejam submetidos a rigorosos testes de qualidade, ao longo das várias fases do seu fabrício. Os produtos APC caracterizam-se por uma identidade requintada, conferida pela combinação das tecnologias com os processos manuais, que asseguram a perfeição e inovação do acabamento dos produtos.

Através de um trabalho de equipa coeso, criativo, responsável e disponível, para a mudança e para novas oportunidades de negócio, APC garante a sua antecipação na resposta às necessidades e tendências de mercado.

Com empenho e confiança recíproca de todos pretendemos corresponder às exigências dos tempos, modernizando e contribuindo para o sucesso de todos os intervenientes.

A nossa marca APC está em constante evolução e acompanha as mudanças da arquitectura moderna.

APC has as main activity the Production and Commercialization of Hardware for Furniture and Civil Construction.

APC, in the last years, has grown from a sustainable and continuous form, being today part of one of the main economical groups, when it comes to Hardware operating in Portugal. Currently our presence can be found in several foreign markets due to our continued progressive work on exportation.

With a vast diversity of products in stainless steel, APC is a modern company, with ambition and determination in the pursuit of its goals, fundamentally in the growth and continuous development of its design lines and, with that, we can answer the many challenges of the market and fulfill all existing gaps.

Within production, APC has invested in the most advanced technologies, a motto associated with our family type company character, where you can find an excellent relation with price and quality.

The elevated standards of quality from APC's products come due to rigorous tests of quality. All items have to pass through several phases of manufacturing and testing. All our products are categorized by a refined identity, certified by the combination of technology and the use of manual processes that assures perfection and innovation of all finished products.

Through responsible work, creativity, and a united team, always available for the changes and new opportunities of business, APC guarantees in anticipation to answer to all the needs and tendencies of the market.

The brand name APC is in constant evolution and tends to follow the changes of the modern architecture.

APC evolution at your service

FR

Aujourd’hui elle continue à se dédier à la fabrication et commercialisation de ferrures pour l’architecture et l’ameublement. APC connaît depuis de nombreuses années déjà une croissance très importante et est actuellement, un des plus grands groupes économiques à opérer sur le marché national et étranger.

Sa vaste gamme de produits en acier inoxydable, en font une entreprise moderne, ambitieuse et déterminée à atteindre ses objectifs, principalement axés dans l’élargissement et l’innovation constante de ses lignes, lui permettant ainsi de répondre aux défis de la demande et d’apporter des solutions aux lacunes existantes. Ses investissements en technologies avancées associées au caractère familial de l’entreprise, sont ses atouts pour offrir un excellent rapport qualité/prix.

Les standards élevés de qualité des produits APC exigent des tests et contrôles rigoureux de conformité tout au long des différentes phases de fabrication. Les produits APC se caractérisent par une identité obtenue de la combinaison des hautes technologies à des procédés manuels qui donnent un produit élégant, d’une incomparable finition et d’une très haute perfection.

Grâce à un travail d’équipe organisé, créatif, responsable et disponible pour le changement et pour de nouvelles opportunités d’affaires, APC garantit une réponse immédiate aux tendances du marché. Avec persévérance et la confiance de tous, nous prétendons correspondre aux exigences du temps, innovant sans cesse et participant à nos succès réciproques.

Notre marque APC est en constante évolution et accompagne les changements de l’architecture moderne.

ES

APC tiene como principal actividad la producción y comercialización de herrajes para muebles y arquitectura.

Habiendo crecido de una forma continua y sustentable en los últimos años, siendo hoy día uno de los grupos económicos de mayor relevo en el área de los herrajes operando en Portugal y en los últimos años se ha expandido para otros mercados externos.

Con una amplia diversidad de productos en acero inoxidable, APC es una empresa moderna, con ambición y determinación en atingir sus objetivos, fundamentalmente en el crecimiento y desenvolvimiento continuo de sus líneas, para que estas puedan dar respuestas a los desafíos de los mercados y solucionar los vacíos que existen.

En la producción, APC ha invertido en las mas avanzada tecnologías, que asociadas al carácter familiar de la empresa permite construir la base para una excelente relación precio/calidad.

Los elevados padrones de calidad de los productos APC exigen que sean sometidos a rigurosos controles de calidad a lo largo de varias fases de su fabrico. Los productos APC se caracterizan por una identidad requintada, conseguida por la combinación de las tecnologías con los procesos manuales, que aseguran la perfección e innovación del acabado de sus productos. A través de trabajo en equipo coheso, creativo, responsable y disponible para la mudanza y para las nuevas oportunidades de comercio, APC se anticipa en la respuesta a las necesidades y tendencias del mercado.

Con empeño y confianza reciproca de todos, pretendemos corresponder a las exigencias de los tiempos, modernizando y contribuyendo para el suceso de todos los intervinientes. Nuestra marca APC esta en constante evolución y acompaña los cambios de la arquitectura moderna.

Aço Inoxidável / Stainless Steel / Acier Inoxydable / Edelstahl / Acero Inoxidable

INTRODUÇÃO / INTRO / INTRODUCTION / EINFÜHRUNG / INTRODUCCIÓN

PT

Designamos a um grupo de aços resistentes à corrosão de aços inoxidáveis, contendo elementos como o cromo, níquel, molibdénio e titânio.

O Cromo, principal elemento responsável pelo aumento da resistência à corrosão, ao entrar em contato com o oxigénio do ar, forma uma película sobre a superfície do aço, protegendo-o contra ataques corrosivos do meio ambiente. Mesmo quando o aço sofre algum tipo de dano, o oxigénio do ar imediatamente combina-se com o Cromo, formando novamente a película protetora.

Surgiram a partir dos estudos realizados na Inglaterra e Alemanha aproximadamente em 1912, desde então, temos presenciado o aparecimento de distintos tipos de ligas. Inglaterra contribuiu com os estudos feitos na liga Fe-Cr, com cerca de 13% de Cr, muito próximo ao que chamamos atualmente de AISI 420 (microestrutura martensítica) e a Alemanha, com a mesma liga, contendo também Ni, bastante idêntica com a AISI 302 (microestrutura austenítica).

ENG

We call stainless steel to a group of corrosion resistant steels containing elements such as chromium, nickel, molybdenum and titanium.

Chromium, the main element responsible to increase corrosion resistance, when in contact with atmospheric oxygen, forms a film over the steel surface, protecting it from corrosive environmental attacks. Even when the steel suffers from some type of damage, the oxygen from the air immediately combines with the chromium to once again form the protective film.

The first studies appeared in 1912 in England and Germany, since then, we have seen the rise of successive alloys. England contributed with Fe-Cr alloy, approximately 13% of Cr, presented in nowadays as AISI 420 (martensitic structure) and Germany, with the same alloy also containing Ni, quite similar to AISI 302 (austenitic microstructure).

FR

Nous appelons un groupe d'Aciers à la corrosion résistant d'acier inoxydable, des éléments tels Contenant le chrome Que de nickel et de molybdène de titane.

Chrome, élément principal responsable de l'augmentation de la résistance à la corrosion au contact de l'oxygène de l'air forme un film sur la surface d'acier afin de le protéger contre les attaques corrosives de l'environnement. Même lorsque l'acier subit une sorte de dommage, l'oxygène de l'air se combine immédiatement avec le chrome pour former le nouveau film de protection.

Ils sont ressortis des études menées en Angleterre et en Allemagne en 1912 à peu près, puisque nous avons vu l'émergence de différents types d'alliages. Angleterre a contribué à des études réalisées sur l'alliage Fe-Cr avec environ 13% de Cr, très proche de ce qui est actuellement appelé AISI 420 (de microstructure martensitique) et en Allemagne avec le même alliage, contenant également Ni, tout à fait identique à AISI 302 (de microstructure austénitique).

ES

Designamos a un grupo de aceros resistentes a la corrosión de acero inoxidable, que contiene elementos como el cromo, el níquel, el molibdeno y el titanio.

El Cromo, principal elemento responsable del aumento de la resistencia a la corrosión, al entrar en contacto con el oxígeno del aire, forma una película sobre la superficie del acero, protegiéndolo contra ataques corrosivos del medio ambiente. Incluso cuando el acero sufre algún tipo de daño, el oxígeno del aire inmediatamente se combina con el cromo, formando De nuevo la película protectora.

A partir de los estudios realizados en Inglaterra y Alemania aproximadamente en 1912, desde entonces, hemos presenciado la aparición de distintos tipos de aleaciones. Inglaterra contribuyó con los estudios hechos en la liga Fe-Cr, con cerca del 13% de Cr, muy cerca de lo que llamamos actualmente AISI 420 (microestructura martensítica) y Alemania, con la misma aleación, conteniendo también Ni, bastante idéntica a la AISI 302 (microestructura austenítica).

DE

Wir bezeichnen eine Gruppe von Stahlkorrosionsbeständige Edelstähle Elemente wie Chrom, Nickel, Molybdän und Titan enthält.

Chrom, Hauptelement , die für die Erhöhung der Korrosionsbeständigkeit bei Kontakt mit Sauerstoff in der Luft bildet einen Film auf der Stahloberfläche gegen korrosive Angriffe aus der Umwelt zu schützen. Auch wenn der Stahl eine Art von Schaden erleidet, Sauerstoff aus der Luft verbindet sofort mit dem Chrom zu bilden

der Schutzfilm wieder.

Sie kamen aus den Studien in England und Deutschland etwa im Jahr 1912 durchgeführt , da wir die Entstehung von verschiedenen Arten von Legierungen gesehen haben. England trug auf Fe-Cr-Legierung mit etwa 13% Cr, ganz in der Nähe zu tun Studien, was zur Zeit AISI 420 (Martensitmikrostruktur) und Deutschland mit der gleichen Legierung genannt wird, das Ni enthält auch ganz identisch mit AISI 302 (austenitischen Gefüge).

OS PRINCIPAIS TIPOS DE AÇO INOXIDÁVEL UTILIZADOS PELA APC

THE MAIN TYPES OF STAINLESS STEEL USED BY THE APC

LES PRINCIPAUX TYPES D'ACIER INOXYDABLE UTILISÉS PAR L'APC

DIE WICHTIGSTEN ARTEN VON ROSTFREIEM STAHL DURCH DIE APC VERWENDET

LOS PRINCIPALES TIPOS DE ACERO INOXIDABLE UTILIZADOS POR LA APC

AISI 201 / 304 / 316

AISI 201

Os dois aços inoxidáveis mais utilizados são o AISI 201 e 304. Cada um tem a sua própria composição, onde podemos encontrar diferenças entre a força, fragilidade e aparência. As características únicas de cada liga permitem à indústria corresponder adequadamente às necessidades de cada projeto.

Parte do grupo austenítico, o aço inoxidável 201, é constituído por níquel, crómio e manganésio. É uma liga que usa menos níquel que o tipo 304 e onde sofre a compensação através do manganésio. Isto faz com o material que mais duro, entretanto, durante a produção, torna-se mais difícil de moldar e soldar. Em comparação com a liga 304, é menos resistente à corrosão e principalmente usada em ambientes de baixa oxidação.

AISI 201

The two most commonly used stainless steels are the 201 and 304 AISI. Each type of steel has its own unique composition, which is why you'll find differences in strengths, weaknesses and appearances. These unique compositions allow the industry to make certain types of stainless steel ideally for certain projects. Part of the austenitic group, stainless steel 201, is made from nickel, chromium and manganese. It is an alloy which uses less nickel than the 304 but is compensated with manganese. This makes it stronger however and on the downside, during production, it becomes more difficult to mold and weld. In comparison to the 304, the 201 is less corrosion resistant and is mostly used in less oxidizing environments.

AISI 304

O mais versátil e utilizado de todos os aços inoxidáveis. Tem menor carbono para minimizar a precipitação de carbonetos e é usado em aplicações de alta temperatura.

Aço inoxidável austenítico de cromo-níquel não-magnético, apresenta boa soldabilidade, elevada tenacidade e ótima resistência à corrosão em diversos ambientes.

AISI 304

The most versatile and widely used of all stainless steels. It has less carbon to minimize the carbides precipitation and it is used for a wide range of high temperature applications.

Austenitic stainless steel chrome-nickel non-magnetic, has good weldability, high toughness and excellent corrosion resistance in a wide variety of environments.

AISI 316

Aço inoxidável austenítico crómio-níquel, com propriedades similares com o tipo 304, benficia em ser mais resistente a ambientes mais agressivos.

Possui teor mínimo de crómio 16%, níquel 10% e 2% de molibdénio. O Molibdénio oferece uma resistência adicional à corrosão tornando-o útil em condições quimicamente hostis. É útil para ambientes de maior corrosão e temperaturas abaixo de zero.

AISI 316

Austenitic stainless steel Chrome-Nickel, with similar properties to the 304 alloy, benefits in being more resistant to the harshest environments.

It has minimum chromium content of 16%, 10% nickel and 2% of molybdenum. The molybdenum provides an additional corrosion resistance making it useful in chemically hostile conditions. It is useful for higher corrosion environments and temperatures below zero.

Acabamentos Disponíveis / Available Finishes / Finitions Disponibles / Vorhandene Ende / Acabados Disponibles

Aço Inoxidável Satinado / Satin Stainless Steel /
Acier Inoxydable Satiné / Edelstahl Matt Gebürstet /
Acero Inoxidable Satinado

Este é o acabamento de preferência e resulta no polimento do aço com objetivo a eliminar a rugosidade da superfície e conseguir um aspeto próximo de "mate".

This is the preferred finish and results from the polishing of stainless steel with the purpose to remove the surface roughness and get an even appearance to "satin".

Aço Inoxidável Polido / Polished Stainless Steel /
Acier Inoxydable Poli / Edelstahl Poliert / Acero Inoxidable Pulido

Este acabamento permite obter uma superfície completamente lisa e de aspetto brilhante, refletindo com distinção os tons envolventes.

This finish allows the surface to be perfectly smooth and with a glossy appearance, reflecting distinctively the surrounding tones.

Aço Inoxidável PVD / PVD Stainless Steel /
Acier Inoxydable PVD / Edelstahl PVD / Acero Inoxidable PVD

Este acabamento permite obter peças em dourado satinado ou polido através da tecnologia de revestimento de superfície PVD (Physical Vapor Deposition).

This finish allows to obtain parts in golden satin or polished through the use of PVD (Physical Vapor Deposition) coating surface technology.

Aço Inoxidável Bronze / Bronze Stainless Steel /
Acier Inoxydable Bronze / Edelstahl Bronze / Acero inoxidable Bronze

Este acabamento permite obter uma superfície lisa e semi brilhante mas são os seus tons característicos que o tornam único.

This finish allows to get a smooth surface and a semi glossy appearance but it's own characteristic and distinctly tones which makes it unique.

Manutenção e Preservação do Inox / Maintenance et Preservation of Stainless Steel / Maintenance et préservation de l'Acier Inoxydable / Wartung und Erhaltung Edelstahl / Mantenimiento y Conservación de Acero Inoxidable

PT

Para manter o aço inoxidável com uma aparência atraente durante mais tempo basta seguir certos cuidados que passam por assegurar que a camada passiva se encontra em bom estado garantindo, para isso, as condições para ela se refazer sempre que for danificada. Basta riscar o aço inoxidável para que a camada passiva seja removida, no entanto uma rápida ação química e o oxigénio asseguram a sua reposição.

Cuidados a seguir:

- Antes da aplicação as ferragens devem ser armazenadas em local seco.
- Devem-se aplicar as ferragens apenas depois do tratamento/envernizamento das madeiras e uma vez aplicadas, devem-se proteger até à conclusão da obra.
- Após a aplicação das ferragens nas portas não se devem utilizar substâncias ácidas, ou que contenham solventes, na limpeza dos pisos.
- Evite o uso de esponjas de aço - podem riscar a camada passiva e depositar resíduos de aço que vão impedir a formação da nova camada surgindo, desta forma, pontos de oxidação.
- Use esponjas plásticas e detergentes neutros, retirando sempre o detergente com água limpa. Poderá secar, depois, com um pano macio.
- Para manter o brilho original, observe o sentido em que o aço foi polido e limpe com a esponja plástica, preferivelmente nylon, sempre no mesmo sentido. Válido apenas para os acabamentos satinados.

ENG

To keep stainless steel with an attractive appearance during long periods of time please keep the passive layer as found and always in good conditions. For that, there has to exist conditions for the chemical action between the chromium and the oxygen to assure a good and quick natural replacement.

Cautions to follow:

- Before applying the fittings should be stored in a dry place.
- All hardware should only be applied after any kind of treatment/varnishing. Once applied all hardware should be protected until the completion of the job.
- After application of the hardware on all doors the use of acids or containing solvents, in the cleaning of the floors, should be used with caution with risk of damage.
- Avoid the use of steel sponges in risk of removing the passive layer and depositing steel waste. This will prevent the formation of the new protective coating causing oxidation points.
- Use plastic sponges with neutral detergents to clean and then remove the detergent with clean water. You may dry out with a soft cloth.
- To maintain the original gloss, keep note of the direction in which the steel was polished and clean with a plastic sponge (preferably nylon) and always in the same direction. This is only valid for satin finished.

FR

Pour maintenir l'acier inoxydable avec une apparence attrayante Durant plusieurs années, il est nécessaire de respecter certaines précautions en matière de nettoyage et veiller à ce que la couche passive ne soit pas endommagée, pour pouvoir la régénérer ultérieurement. Il suffit de rayer l'acier inoxydable pour que la couche passive soit touchée, pour la régénérer il faut créer une action chimique entre le chrome et l'oxygène.

Les précautions suivantes:

- Le matériel doit être stocké dans un endroit sec..
- On doit installer le matériel une fois les travaux de fin de chantier effectués.
- Après l'application des raccords sur les portes ne devraient pas utiliser des substances acides, corrosives, alcalines ou qui contiennent des solvants.
- Évitez le recours aux éponges en acier qui peuvent traverser la couche passive et le dépôt des déchets d'acier qui permettra d'éviter la formation de la nouvelle couche est apparue, par conséquent, les points d'oxydation.
- Employer des éponges synthétiques de préférence en nylon fin et des détergents neutres, toujours retirer le détergent avec de l'eau. Sécher par la suite, avec un chiffon doux.
- Pour maintenir l'éclat original, notez la direction dans laquelle l'acier a été polie et nettoyer, avec un plastique éponge, de préférence en nylon, toujours dans le même sens. Valable uniquement pour les finitions satinées.

DE

Um den Edelstahl länger mit ein attraktives Aussehen zu halten, sollten einige Hinweise verfolgt werden, stellen sie sicher, dass die Passivschicht in einem guten Zustand ist, schaffen sie Bedingungen dies diese sich reproduziert, wenn sie beschädigt ist. Es genügt den Edelstahl zu kratzen damit die Passivschicht entfernt wird, jedoch eine schnelle chemische Aktion und Sauerstoff garantieren die Wiederherstellung.

Hinweise:

- Vor der Anwendung, sollten Eisenwaren in einem trockenen Platz gelagert werden.
- Die Eisenwaren sollten erst nach der Behandlung/Lackierung vom Holz verwendet werden, einmal eingebaut, müssen diese bis zum Abschluss der Bauarbeiten geschützt werden.
- Nach dem Einbau der Türgriffe sollten keine säurige Substanzen verwendet werden, oder Lösemittel bei der Reinigung von Böden.
- Vermeiden Sie die Benutzung von Schwämmen aus Stahl – diese können die stahlpassive Schicht zerkratzen und Rückstände zurück lassen, die die Bildung von der Neuschicht verhindert, in dieser Form entstehen Oxidationsflecken.
- Verwenden Sie Kunststoffschwämme und einen neutralen Reiniger, waschen sie diesen immer mit sauberem Wasser ab. Sie können dann mit einem weichen Tuch abtrocknen.
- Um den ursprünglichen Glanz zu erhalten, achten Sie auf die Richtung, in die der Stahl poliert war und reinigen mit einem Kunststoff-Schwamm, vorzugsweise Nylon, immer in die gleiche Richtung. Gültig nur für Satin Verarbeitungen.

ES

Para mantener el acero inoxidable con una apariencia atractiva durante más tiempo basta seguir ciertos que pasan por asegurar que la camada pasiva se encuentra en buen estado garantizando, para eso, las condiciones para ella si rehacer siempre que sea damnificada. Basta arrapatear el acero inoxidable para que a camada pasiva sea removida, sin embargo una rápida acción química y el oxígeno aseguran su reposición.

Cuidados a tener:

- Antes de la aplicación las herrajes deben almacenarse en local seco.
- Se deben aplicar las herrajes apenas después del tratamiento y aplicación del barniz das maderas y una vez aplicadas, se deben proteger hasta la conclusión de la obra.
- Después la aplicación de las herrajes en las puertas no se deben utilizar substancias ácidas, o que contengan solventes, en la limpieza de los pisos.
- Evite el uso de esponjas de acero que pueden rayar la camada pasiva y depositar residuos de acero que van a impedir la formación de la nueva camada surgiendo, de esta forma, puntos de oxidación.
- Use esponjas plásticas y detergentes neutros, retirando siempre el detergente con agua limpia. Podrá secar, después, con un paño suave.
- Para mantener el brillo original, observe en que sentido fue pulido el herraje y limpíe con la esponja plástica, de preferencia de nylon, siempre en el mismo sentido. Válido apenas para el acabado cepilado.

PT

Com o objectivo de potencializar a inovação do produto e oferecer aos nossos clientes uma maior flexibilidade, a APC oferece múltiplas possibilidades de personalização, permitindo a compatibilidade entre todos os puxadores, rosetas e placas.

O sistema é de fácil utilização e não é necessário o uso de ferramentas especiais para combinar diferentes elementos.

ENG

In order to potentiate product innovation and provide our clients with user friendly flexibility, APC provides access to a wide-range of customization possibilities. This allows compatibility amongst all the different handles, roses and plates. The system is very easy to use because there is no need for the use of special tools to adapt the different elements.

FR

Visant à renforcer l'innovation des produits et à doter nos clients d'une plus grande flexibilité d'utilisation, APC offre des multiples possibilités de personnalisation, permettant la compatibilité entre les différentes poignées, rosaces et plaques.

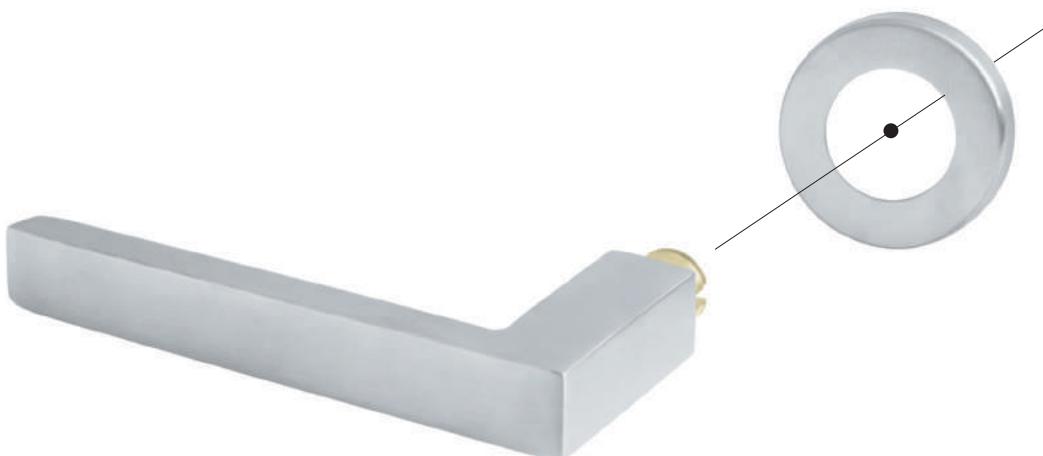

Le système est facile à mener et l'utilisation d'outils spéciaux n'est pas nécessaire pour combiner les différents éléments.

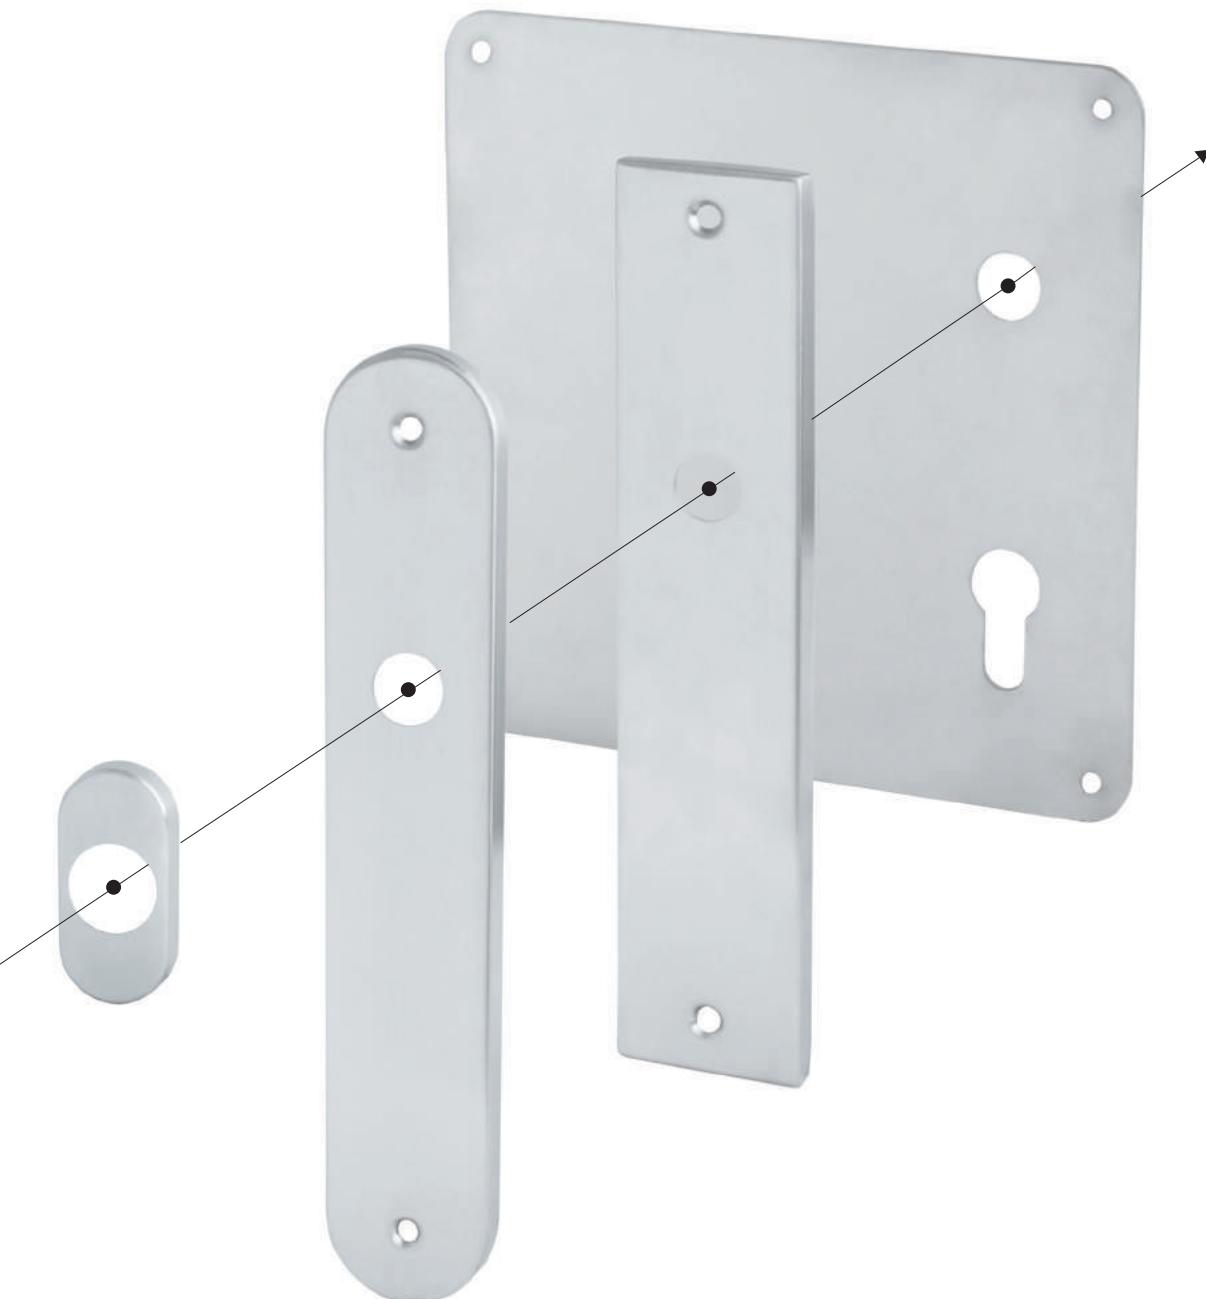

ES

Con el fin de potenciar la innovación de sus productos y proporcionar flexibilidad de uso a nuestros clientes, la APC proporciona acceso a una amplia gama de posibilidades de personalización. Esto permite la compatibilidad entre todas las diferentes manillas, rosetas y placas.

El sistema es muy fácil de usar pero que no se requieren herramientas especiales para combinar los diferentes elementos.

KIT PARA PORTA DE VIDRO USO INTENSIVO

Kit composto por:
 2 carros superiores para tubo e porta de vidro
 2 batentes de porta de fixação ao tubo
 2 suportes laterais para o tubo
 2 tampas laterais para o tubo
 1 suporte central de parede para o tubo
 1 guia inferior para a porta de vidro
 2 tubos lineares rosados em um lado
 1 chave de aperto (uso médio)

KIT FOR GLASS DOOR HEAVY DUTY

One set includes:
 2 tracks rollers for tube and glass door
 2 rollers stoppers
 2 side fixing brackets for tube
 2 tubes end plug
 1 center fixing bracket for wall to tube
 1 bottom guide for glass door
 2 tubes linear threaded on one side
 1 fixing tool (light duty)

KIT POUR PORTE EN VERRE USAGE INTENSIF

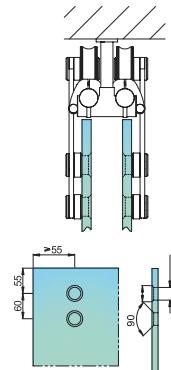

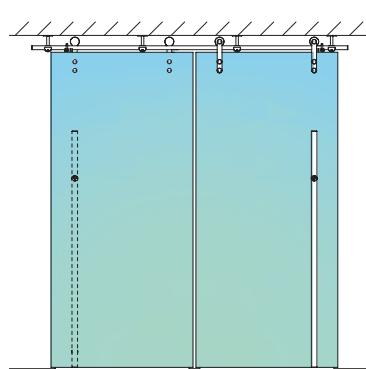

Kit composé de:
 2 chariots supérieurs sur tube et porte en verre
 2 butées de porte de fixation sur tube
 2 supports latéraux sur tube
 2 bouchons latéraux sur tube
 1 support mural central sur tube
 1 guide inférieur pour porte en verre
 2 tubes filetage sur un côté
 1 clé d'ajustage (utilisation légère)

KIT FÜR GLÄSTÜR INTENSIVE NUTZUNG

Kit besteht aus:
 2 bahnen rollen für rohr und glastür.
 2 türstopper zur festsetzung der röhre
 2 einfache seitenstützen für rohr
 2 seitenabdeckungen für rohr
 1 zentraler stützwand für rohr
 1 untere führung für glastür
 2 gerade gewinde rohre ein seite
 1 drehmomentschlüssel (mediennutzung)

KIT PARA PUERTA DE CRISTAL USO INTENSIVO

Un sistema incluye:
 2 roldanas superiores para puerta de cristal
 2 topes de puerta de fijación en el tubo
 2 soportes laterales para el tubo
 2 tapones laterales para el tubo
 2 soporte central union de pared y para el tubo
 1 guía inferior para la puerta de cristal
 2 tubos lineales rosados en uno de los lados
 1 llave de ajuste (uso ligero)

Opções de Acabamentos / Finishes Options

KIT PARA PORTA DE VIDRO / USO INTENSIVO

Espessura da porta: 8 a 12mm

Carga máxima: 100 Kgs

Tubo: Ø25mm

Kit composto por:

- 2 carros superiores para tubo e porta de vidro
- 2 batentes de porta para fixação ao tubo
- 2 suportes laterais para tubo
- 2 tampas laterais para tubo
- 1 suporte central de união da parede ao tubo
- 1 guia inferior para porta de vidro
- 2 tubos lineares rosados em um lado
- 1 chave de aperto (uso médio)

KIT FÜR GLÄSTÜR / INTENSIVE NUTZUNG

Türblattstärke: 8 a 12mm

Maximalgewicht: 100 Kgs

Rohr: Ø25mm

Kit besteht aus:

- 2 bahnen rollen für rohr und glastür
- 2 türstopper zur festsetzung der röhre
- 2 einfache seitenstützen für rohr
- 2 seitenabdeckungen für rohr
- 1 zentraler Stützwand fur rohr
- 1 untere führung für glastür
- 2 gerade gewinde rohre ein seite
- 1 drehmomentschlüssel (mediennutzung)

KIT FOR GLASS DOOR / HEAVY DUTY

Door thickness: 8 to 12mm

Maximum weight: 100 Kgs

Tube: Ø25mm

One set includes:

- 2 tracks rollers for tube and glass door
- 2 roller stoppers
- 2 side fixing brackets for tube
- 2 tubes end plug
- 1 center fixing bracket for wall to tube
- 1 bottom guide for glass door
- 2 tubes linear threaded on one side
- 1 fixing tool (light duty)

Kit Para puerta de cristal / Uso Intensivo

Grosor de la puerta: 8 a 12mm

Carga máxima: 100 Kgs

Tubo: Ø25mm

Un sistema incluye:

- 2 roldanas superiores para el tubo y la puerta
- 2 topes de puerta de fijación en el tubo
- 2 soportes laterales para el tubo
- 2 tapones laterales para el tubo
- 1 soporte central union de pared y para el tubo
